1. Brainstorming and Ideation

Implement Client Script & UI Policy (Incident)

Introduction

The project 'Implement Client Script & UI Policy (Incident)' is developed on ServiceNow to improve Incident management using UI Policies and Client Scripts.

Problem Identification

Incident records may require controlled field behavior, validation and user guidance. Manual checking can lead to incorrect or unwanted updates.

Idea Generation

The team considered ways to make Incident form behavior more controlled and user-friendly. The selected approach uses ServiceNow UI Policies and Client Scripts.

Selected Idea

Implement UI Policy controls and Client Scripts for Incident records. The solution includes field control based on Impact and validation against unwanted list editing.

Expected Benefits

Improves data consistency, reduces incorrect updates, provides validation, and makes Incident handling more systematic.
