2. Requirement Analysis

Implement Client Script & UI Policy (Incident)

Project Objective

To configure ServiceNow Incident records using UI Policies and Client Scripts so that important fields are controlled and validated according to business requirements.

Functional Requirements

1. Create a UI Policy on Incident.
2. Apply conditions based on Impact.
3. Configure UI Policy Actions for field behavior.
4. Create an onCellEdit Client Script for State.
5. Prevent unwanted State changes through list editing.
6. Test the configured behavior.

Non-Functional Requirements

The configuration should be easy to use, consistent, maintainable, and provide clear validation feedback.

Software Requirements

ServiceNow instance, web browser, ServiceNow Incident application, GitHub for project documentation.

User Requirements

Users should be able to create and manage Incident records while the configured policies automatically control required behavior.

Expected Output

A working ServiceNow Incident configuration with UI Policy and Client Script behavior demonstrated through testing.
